**TROCAL 88.**

AluClip Pro functional aluminium cover.

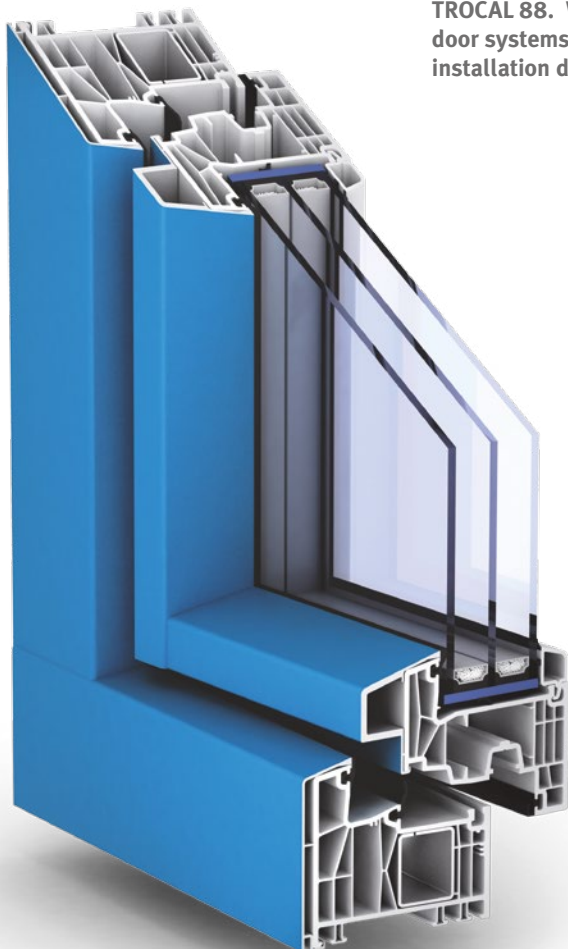

# Aesthetics plus maximum insulation.

## »» TROCAL 88 AluClip Pro.

TROCAL 88 AluClip Pro is an aluminium cover that performs the static function of conventional steel reinforcement elements. The empty chamber inside the frame improves the window's heat insulation performance. This modern system therefore unites the advantages of the two materials of PVC and aluminium in one single window. PVC profiles have optimum heat insulation and soundproofing properties, as well as durable functionality. Aluminium, on the other hand, is elegant, weatherproof and available in a wide variety of colour finishes.

**TROCAL 88. Window and door systems with 88 mm installation depth.**

### ■ Elegant design.

Linear, semi-recessed window design with butt-jointed aluminium profiles.

### ■ Excellent heat insulation.

Outstanding heat insulation compared with aluminium windows.

### ■ Individual features.

Wide range of glazing options up to 56 mm thick, from triple glazing to special functional glazing.

### ■ Excellent statics.

High stability as a result of the aluminium profile.

### ■ Large range of colours.

Aluminium look on the outside, neutral white on the inside.

Practically unlimited choice of aluminium cover colours with finishing techniques including Eloxal and powder coating.
